

# GPI - Internet student monitoring

Adapted intervention plans software

## ADVANTAGES AND BENEFITS

- **Detection of at-risk students using locally defined criteria**
  - Significant difference in school results in comparison to a previous year or term
  - Absences
  - Behaviour
- **Creation and integration of forms for the personalized follow-up of students**
  - Observation and behaviour charts
  - Intervention plan
  - Health chart
  - Journals
  - Etc.
- **Setting-up of a dynamic bank**
  - Objectives
  - Means
  - Particular situations
  - Capabilities
  - Issues
  - Etc.
- **Warning boxes and personalizable colours to signal particular situations**
- **Meeting-management calendar for the intervention plan revision**
- **Integration with GPI - Internet teacher and Édu-groupe Portal**
- **IT management of the national Canvas of the intervention plan**

The Internet student monitoring system (Suivi personnalisé Internet "SPI") is a prevention and assistance tool for the individualized follow-up of students. It offers school directors, and all those involved, computerized tools allowing them to quickly detect those students who require specific help, to record all the information pertinent to the help process in the form of appendices to the student records, to establish, when required, an intervention plan for certain students and to ensure the follow-up of this intervention plan. The system will also be able to serve as a positive reinforcement tool by indicating, upon request, particular situations where students' progress deserves to be emphasized.

Available through the Internet, the system is easily accessed by all the participants involved. In addition to being the ideal tool for a school's directors, teachers and non-teaching personnel, the SPI will quickly become an essential instrument for students' tutors.

## Intended clientele

- School directors
- Non-teaching personnel
- Teachers
- Students and their parents by the Édu-groupe Portal developed by Société GRICS
- Students' tutors or titular teachers

## Functions

### **Selection lists**

The school will be able to set up a bank of selection lists that it will use when recording the students' intervention plans. The users will thus save a great deal of time as they will not have to find new expressions to describe situations they have previously encountered. It will be possible to modify and complete the items contained in the selection lists to answer specific needs, with no limits as to the number of lists or the content of each.

### **Prevention criteria**

For each student, GPI-Internet student monitoring will analyze prevention criteria: summary, term and competency results; coded messages; absences; memos. When a particular situation is encountered, a signal will be sent to the director, the tutor, the parents, in accordance with the school's decision (e.g. decrease of 20% in relation to the previous term, appreciation grade going from C to E, abnormal increase in the number of absences, etc.).

Thanks to the prevention criteria, the SPI could signal the case of a student who has made significant progress and propose sending a letter of congratulations or an e-mail to the parents.

### **Forms**

The SPI will allow the user to electronically manage and create all the forms concerning students and, more precisely, the recording of intervention plans. It will also be possible to set a different level of confidentiality for each item on the form and to consult the forms on-screen or print them in the same format as on the screen.

To save data entry time, the system will draw any pertinent information from the GPI database. Direct access to the student history will allow the user to understand the current situation and make enlightened decisions with students and their parents regarding academic achievement.

### **Student record**

Starting from the menu, the user will directly access the various elements of the student record : history, forms, intervention plan, academic record, absences and memos. If necessary, particular situations will be highlighted by contrasting colours chosen by the user so that no information escapes attention. Charts will also be used to visualize the student's progress.

### **Warning box**

A personalized warning box will indicate particular situations regarding a student to all those involved. From this warning box, the user will be able to take note of the situation, access the student record and take appropriate action.

### **Confidentiality**

As it will manage confidential information, the SPI has been developed so as to ensure the security of information and exchanges.

### **SPI - IP (Intervention plan)**

The SPI also allows the IT management of the national Canvas of the intervention plan. The fact of being integrated into the SPI facilitates the direct access to the various information of the student file among which the school results, the absences and the memos.

Its main features are:

- Management of the various meetings related to IP: convocations, attendance, reminders.
- Getting, through the Web, the information about the capabilities and needs of students.
- Management of the objectives and needs of students and their periodic evaluation.
- Transfer to another school board and one school to another.
- History of the IP of a student.
- Printing of IP in accordance with the Ministerial format.
- Production of various reports for the administrators.
