

# PHOTO-TECH

Software for creating, managing and printing ID cards

---

## ADVANTAGES AND BENEFITS

- *Flexibility*
- *Autonomy*
- *Adaptability*

**P**HOTO-TECH™ is a highly flexible software program for creating, managing and printing ID cards. This program not only allows a manager to rapidly recoup the cost of the necessary equipment but also provides a lasting, flexible, effective solution.

Developed in a Windows™ environment, this program provides outstanding advantages.

## Intended clientele

- School boards wishing to manage student ID cards efficiently
- Organizations requiring an easy method of issuing identity or access cards

## **Main Features**

### ***Flexibility***

PHOTO-TECH can process several sets of data specific to any user's needs. The system can retrieve selected data from the software already used by the school. For example, it is possible to massively download data originating from JADE, GÉOBUS and GPI to create a bank of students or a bank of teachers. Thanks to PHOTO-TECH, it is even possible to integrate the student's complete schedule on the back of the card. The photo can also be integrated into other Société GRICS graphic systems, such as JADE and GPI.

### ***Autonomy***

The school's usual process involves dealing with an external provider for the production of ID cards; PHOTO-TECH has the advantage of being used on-site, daily and at any time. PHOTO-TECH thus eliminates the problems caused by the arrival of a new student in the course of the school year or the loss of a card. Producing and printing a new card is done on-site, hence providing the school with greater control. It is important to add that the photos are computerized and that the reprinting of the card requires no new camera entry.

### ***Adaptability***

The system offers you all the adaptability desired to create the student ID card thanks to a personalized page setup, a variable format, photos, bar codes, the integration of personalized logos, set texts, etc. For example, it is easy to integrate, into the card, the student's ID number and bar code for the borrowing of school supplies and books from the library. You can also add the picture of a lunch box for those who have lunch at the school or the picture of a bus for those with school busing.

In short, the possibilities offered the users are numerous; it is possible to create, from one set of data, several card models: cards for "rolodex"-type files, plastic cards, transportation cards, cards for the student file, cards for special activities, class lists with photos, etc.

GPI users can transfer records one at a time to PHOTO-TECH using a gateway. The two data banks thus automatically evolve together.
